Million Dollars

FIELD CROPS

HIGHLIGHTS -- 2004 CROP YEAR

Wintertime temperatures were near normal to slightly below, while rainfall was near normal. Overall, the spring months were mostly dry, with temperatures near normal. The first half of June was dry, while the last half of the month saw numerous showers. Tomato Spotted Wilt Virus was a problem for tobacco growers. The remainder of the summer continued with above normal rainfall. Overall, temperatures during the summer were near normal to slightly below normal. The big story is the weather conditions of September, which brought three tropical storms to the State. The heavy rains delayed harvest and effected yields in cotton and peanuts. High winds blew away nuts from pecan trees. The remainder of the fall and early winter, temperatures and rainfall were near normal.

COTTON

Cotton planting was virtually complete by the middle of June, near the five-year average. Overall, the crop was in good condition throughout the growing season. Above normal rainfall and moderate temperatures were very beneficial to the crop. Harvesting weather was unfavorable and yields were lower than earlier thought. Yields averaged 674 pounds per harvested acre, compared with 785 pounds in 2003. There were 1,290,000 planted acres and 1,280,000 acres harvested in 2004. This compares with the 1,290,000 acres harvested in 2003. Georgia's production totaled 1,797,000 bales (480 lbs.), down 15 percent from the 2,110,000 produced in 2003. The preliminary price for 2004 cotton lint was 47.0 cents per pound, compared with 61.2 cents per pound in 2003.

CORN

The crop thrived from the numerous summertime showers. Of the 335,000 planted acres, there were 280,000 acres harvested for grain. Grain yields were 130 bushels per acre, the second highest on record. Grain production totaled 36,400,000 bushels, which is down 3 percent from 2003. Corn was cut for silage from 45,000 acres, the same as in 2003. Silage yields averaged 16 tons per acre, one ton per acre less than in 2003. Preliminary grain prices averaged \$2.20 in 2004, compared with \$2.45 in 2003.

PEANUTS

Peanut yields in 2004 decreased from the previous year to average 3,000 pounds per acre. Above normal rainfall and moderate temperatures during the summer provided for favorable conditions for a good crop. Growers lost yield due to poor harvesting conditions. Production in 2004 totaled 1.83 billion pounds (915,000 tons), down 2 percent from 2003. The production decrease resulted from a decrease yield from the previous year. Planted acreage increased to 620,000 acres, compared with 545,000 acres in 2003. Harvested acreage totaled 610,000 acres in 2004. Georgia produced 43 percent of the Nation's peanuts in 2004.

TOBACCO

Transplanting got off to a very slow start due to dry soils. The crop was rated in mostly fair to good condition throughout the growing season. Harvest was underway by the middle of June. Production totaled 46.7 million pounds,

21 percent less than the 2003 crop. Yields averaged 2,030 pounds compared with 2,200 pounds per acre in 2003. Harvested acreage showed a decrease, going from 27,000 acres in 2003 to 23,000 acres in 2004. Prices decreased slightly compared with the previous year. The 2004 crop averaged \$183.50 per hundredweight (cwt.), compared with \$185.50 in 2003. Total value of the 2004 tobacco crop was \$86 million compared with \$110 million in 2003.

SOYBEANS

Soybean planting got underway about the third week of April. The crop benefitted from the good growing conditions. Final yields averaged 31 bushels per harvested acre, two bushels less than last years State record of 33 bushels per acre. Weather conditions during harvest were fair. Soybean acreage increased to 280,000 acres planted compared with 190,000 acres in 2003. Harvested acreage was 270,000 acres compared with 180,000 acres in 2003. Georgia's production was 8.37 million bushels, up 41 percent from 2003. Preliminary prices averaged \$5.30 per bushel, compared with \$7.47 per bushel in 2003.

SORGHUM

Sorghum planted for all purposes amounted to 45,000 acres in 2004, compared with 55,000 in 2003. Acreage harvested for grain tallied 25,000 acres in 2004, 13,000 acres less than in 2003. Yields averaged 47 bushels per acre and grain production totaled 1.18 million bushels, 34 percent less than in 2003. Prices averaged \$2.02 per bushel. Sorghum harvested as silage was 15,000 acres, the same as in 2003. Silage yields averaged 10 tons per acre, 12 tons in 2003.

HAY

Hay production totaled 1.62 million tons, down 10 percent from 2003. Yields averaged 2.7 tons per acre from all cuttings, down 0.30 of a ton from 2003. Acreage harvested totaled 600,000 acres, the same as in 2003. The prices farmers received for hay sold averaged \$55.00 per ton, down \$7.00 per ton from 2003.

SMALL GRAINS

Acres of wheat planted in 2004 were 330,000, compared with 380,000 acres in 2003. Harvested acres were 190,000, compared to 230,000 acres in 2003. Yields had a slight decline from the previous year as growers averaged 45 bushels per acre, compared to 46 bushels per acre in 2003. Oats planted acreage was 90,000, down 10,000 acres from a year earlier. Harvested acres were 25,000, compared with 30,000 the previous year. Yield averaged 50 bushels per acre, compared with 56 bushels per acre in 2003. Rye planted acreage decreased to 250,000 in 2004, compared with 270,000 acres in 2003. Harvested acres totaled 25,000, compared to 50,000 acres in 2003. Yields were at 24 bushels per acre, compared with 16 bushels per acre in 2003.
